

Resilience orchestration for a world **that never slows down.**

DRIS is built as a **central intelligence system**—a single spine where preparedness, live feeds, and scorecard signals converge. Instead of chasing updates across spreadsheets, chats, and siloed maps, teams work from one auditable picture with **AI-assisted alerting** to surface what is abnormal, urgent, or drifting—so leaders act earlier with less noise.

[Sign in to platform →](#)

Central intelligence.

One canonical view of jurisdictions, assets, and readiness—so everyone debates the same facts, not conflicting exports.

DRIS™ High-Value MVP Roadmap & **Developer Actions**

DRIS™ High-Value MVP Roadmap

MVP OBJECTIVE:

Deliver a working Disaster Resilience Intelligence Scorecard (DRIS™)
that quantifies resilience, classifies readiness, and identifies gaps to drive action.

PATENT & TRADEMARK
PENDING

MVP SCOPE (LOCKED)

✓ INCLUDED

- Role-based access (3 roles)
- KPI scoring (0-3 + N/A)
- Scoring engine + weights
- Classification (4 tiers)
- Critical KPI caps
- Dashboard (score + gaps)
- Workflow (input → validate → approve)
- Basic audit logs

✗ EXCLUDED (POST-MVP)

- AI scoring
- Scenario simulation
- Equity engine
- Global dashboards
- Mentor network

**CORE SYSTEM
ARCHITECTURE:**

DRIS™ platform is a unified Intelligence Framework for Disaster Resilience.

DRIS™ H-V MVP Core System Architecture

CORE SYSTEM

ARCHITECTURE:

DRIS™ platform is a unified Intelligence Framework for Disaster Resilience.

DRIS™ H-V MVP Core System Architecture

AI SYSTEM COMPONENTS

- Document Intelligence Engine
- KPI Mapper
- Evidence Extractor
- Scoring Assistant
- Critical KPI Cap Engine
- Recommendation Engine
- Scenario Simulator
- Equity Analytics Engine
- Mentor Matching Engine
- Audit & Explainability Engine

AI EXPLAINABILITY REQUIREMENT

- DRIS must always answer [Essential for government trust]:
 - Why did this score change?
 - What evidence supports it?
 - Who approved it?
 - What rule was applied?
 - What action is recommended?

DRIS™ H-V MVP Core System Architecture

RECOMMENDED AI GOVERNANCE RULES

- AI cannot finalize scores
- AI cannot override critical KPI caps
- AI cannot delete evidence
- AI cannot approve records
- AI must show evidence
- AI must log all changes

NOTE: Human reviewer finalizes score

Role-Based Access

	Persona	Layout	Key Actions
 ADMIN System control & configuration	Administrator Dashboard [Control Tower] Purpose: System Governance & National Data Control Reporting Level: Decision Type: Governance (Admin)	Top: Total Users. Active vs Inactive Users. Data Integrity Score. System Usage Rate Middle: User Activity Feed. Data Validation Queue. State / Parish Data Quality Ranking Bottom: Audit Logs. Access Control Summary. Lock/Unlock Records. Run Audits	Key Actions: Approve / Reject Users. Assign Roles Design Rules: Full System Visibility & Emphasis on control & Traceability
 PARISH MANAGER Approval & decision-making	Operational Manager Dashboard [Parish Manager] Purpose: Run State / Parish Effectively Decision Type: Operational (Manager)	Top: State / Parish Workforce Count. Vacancies. Data Completion %. Staff Status (Active/Inactive) – no PII Middle: Employee List (filtered to state / State / Parish), Staffing Gaps by role. Performance/Status indicators Bottom: Alerts [Missing Employee Data, Vacant Critical Roles. Pending Approvals] – no PII	Approve employee records Flag vacancies Request staffing Design Rules: Action-first (what needs fixing today) Clear “next steps” visibility
 DATA OFFICER KPI input & data management	Data Officer Dashboard [Analytical] Purpose: Data Accuracy & Reporting Decision Type: Analytical (Data Officer)	Top: Records Updated [today/week]. Error Rate. Data Completeness %. Middle: Data Validation Queue. Employee Records Table [Editable]. Filters [Role. Location. Status] – no PII Bottom: Reports [Workforce Trends. Role Distribution. Data Gaps] – no PII	Key Actions: Create / Update Employee Records. Run Reports. Clean / Validate Data Design Rules: Data-Heavy. Advanced Filters + Export Capability.

Evidence: Upload Document. Add Source Link. Add Notes. Submit for Approval.

Permissions

DRIS™ PERMISSION MATRIX

Design principle: least privilege + role-based access (RBAC). Each persona can only see, create, edit, approve, or export what is required.

Core Permission Types	
PERMISSION	MEANING
View	Read-only access
Create	Add new records
Edit	Modify existing records
Approve	Validate/confirm records
Delete	Remove records (restricted)
Export	Download data/reports
Admin	Full control (users, roles, system)

DATA PROTECTION DOMAINS:

- **Employee Data** (ID, name, position, location, status)
- **User Accounts** (system users)
- **State / Parish Data**
- **Reports & Analytics**
- **Audit Logs**
- **System Settings**

DRIS™ PERMISSION MATRIX BY PERSONA

ADMIN

System control &
configuration

DOMAIN	PERMISSIONS
Employee Data	View (All)
User Accounts	Create, Edit, Disable, Assign Roles
State / Parish Data	View (All)
Reports	View + Export
Audit Logs	Full View
System Settings	Admin
Rule: Full control, but no direct editing of employee records (prevents data corruption).	

DRIS™ PERMISSION MATRIX BY PERSONA

PARISH MANAGER

Approval &
decision-making

DOMAIN	PERMISSIONS
Employee Data	View (State / Parish), Approve, Limited Edit
User Accounts	View (State / Parish users only)
State / Parish Data	View + Edit (State / Parish only)
Reports	View + Export (State / Parish only)
Audit Logs	View (State / Parish activity only)
System Settings	None
Rule: Can approve but not fully control system.	

DRIS™ PERMISSION MATRIX BY PERSONA

DATA OFFICER

KPI input &
data management

DOMAIN	PERMISSIONS
Employee Data	Create, Edit (State / Parish only)
User Accounts	None
State / Parish Data	View
Reports	View + Export (State / Parish)
Audit Logs	None
System Settings	None
Rule: Owns data accuracy, no approval authority.	

DRIS™ High-Value MVP Permissions

DRIS™ CRITICAL CONTROL RULES (NON-NEGOTIABLE)

Data Ownership Hierarchy

- Country / State → State / Parish → User
- No lower level can override higher-level approvals

NOTE: State may seem confusing showing up on both country and Parish levels; however, within U.S. States can be both. Developer must think through hierarchy and SHOULD discuss with technical designer (Marceen) if still confusing. Example of how states can be defined using the country example is below:

Example: Country / **State** → Parish / Province / **Counties** → Towns / Townships / Etc.

Approval Workflow Enforcement

- Field/User → Data Officer → State / Parish Manager → (optional) Country Admin audit
- Records are **not “final” until approved**

DRIS™ CRITICAL CONTROL RULES (NON-NEGOTIABLE)

Scoped Access (VERY IMPORTANT)

- Users can ONLY see:
 - Their State / Parish (unless national role)
 - Their assigned permissions

Example:

- State / Parish A user **cannot see State / Parish B data**

Data Locking

- After approval:
 - Records become **locked**
 - Only Admin can unlock

DRIS™ CRITICAL CONTROL RULES (NON-NEGOTIABLE)

Sensitive Field Protection

- Fields such as:
- National ID
- Personal identifiers
- **Should have:**
 - Masking (**1234)
 - Restricted visibility

Permission Flow Example (Real Scenario)

- Field User adds employee
- Data Officer edits + completes record
- State / Parish Manager approves
- Record becomes locked
- Country Admin can audit but not alter

DRIS™ High-Value MVP Permissions

DRIS™ CRITICAL CONTROL RULES (NON-NEGOTIABLE)

Technical Implementation Model

Use **RBAC + Attribute-Based Controls (ABAC)**:

RBAC → Role (State / Parish Manager, etc.)

ABAC → Attributes:

Location = State / Parish

Status = Approved/Unapproved

Ownership = Creator

Important Attributes:

Not too many admins where everyone can edit everything

Approval layer and audit logs to avoid Cross-State / Parish visibility leaks

NOTE: This enables DRIS™ to have strong positioning as a government compliant readiness engine, scalable to multiple countries with secure handling of workforce data and clean analytics (no corrupted data).

DRIS™

KPI Scoring

DRIS™ H-V MVP Scoring Model Overview

1 DRIS SCORING MODEL OVERVIEW

Transforming Data into Decision-Ready Insights

KPI SELECTION
Evaluate defined
Key Performance
Indicators

SCORE ASSIGNMENT
Selection-based
scoring
(0–3 scale)

**SECTION
NORMALIZATION**
Calculate section
scores as
percentages

**WEIGHTED
AGGREGATION**
Apply section
weights to derive
overall score

**FINAL SCORE &
CLASSIFICATION**
Resilience level
and actionable
insights

CORE PRINCIPLE:

Scores cannot indicate Thriving if critical KPIs are missing.
The model is designed to reflect true resilience, not checklist completion.

DRIS™ H-V MVP Scoring Structure

2 SCORING STRUCTURE

KPI SCORING SCALE (0-3)

3	Fully Met
2	Largely Met
1	Partially Met
0	Not Met
N/A	Not Applicable (excluded from scoring)

**Not Applicable" KPIs are excluded from the denominator and do not impact the score.

SECTION NORMALIZATION

Section Score (%) =

$$\frac{\text{Points Earned}}{\text{Points Possible (excluding N/A)}} \times 100$$

Each section is scored as a percentage of achievable points.

OVERALL DRIS SCORE

Overall DRIS Score =

$$\sum (\text{Section Score} \times \text{Section Weight})$$

Weighted aggregation across all sections produces the final score.

Strategic Note:

We are not building a perfect 100-point system. Instead, it is a defensible, non-inflatable readiness index, where scores **MUST** reflect reality, not completion bias. This means, critical gaps **MUST** mathematically prevent high performance ratings.

3 FRAMEWORK SECTIONS & WEIGHTING (EXAMPLE)			
SECTION (TIER)	DESCRIPTION	EXAMPLE TOTAL POINTS*	WEIGHT
 TIER 1 RESILIENT	Strong leadership, planning, and systems are in place.	11–14	20%
 TIER 2 THRIVING	Capabilities are robust and positioned for long-term success.	9–11	15%
 TIER 3 NEEDS SUPPORT	Significant gaps exist that require attention and resources.	6–8	15%
 TIER 4 NOT YET STARTED	Foundational elements are missing or not yet initiated.	0–5	5%

*Total achievable points after excluding N/A items may vary (88–91).

WHY WEIGHTING MATTERS

-  Reflects relative impact of each section on overall resilience.
-  Prevents low-impact areas from overshadowing critical foundations.
-  Drives balanced, data-informed decision making.

DRIS™ H-V MVP Scoring Engine & Weights

WEIGHTED OVERALL SCORE (ACTUAL)

- Assigned to each framework that are section percentage weights based on current totals.

FRAMEWORK CATEGORY	SCORE	% WEIGHT WITHOUT TRIBAL / 83	% WEIGHT WITH TRIBAL / 97
Leadership & Governance	14	16.87%	14.43%
Tribal Nations Integration	14	N/A	14.43%
Capacity Building & Community Planning	8	9.64%	8.25%
Infrastructure	10	12.05%	10.31%
Economic Recovery	9	10.84%	9.28%
Financial & Resource Management	9	10.84%	9.28%
Housing Recovery	10	12.05%	10.31%
Health & Social Services	10	12.05%	10.31%
Natural & Cultural Resources	6	7.23%	6.19%
Public Information & Community Engagement	7	8.43%	7.22%
Total	83 / 97	100%	100%

DRIS™ TRIBAL NATIONS INTEGRATION FRAMEWORK & KPIs DEEPER DIVE

Tribal Nations must be explicitly integrated into recovery planning. This includes incorporating Tribal Nation considerations such as jurisdictional authority, governance structures, and coordination boundaries to ensure alignment with sovereign rights and effective collaboration.

TRIBAL NATIONS KPIs:

- **Established Engagement Framework (Critical):**
Establish formal structure for engagement with Tribal leadership, including Memorandums of Understanding (MOUs), consultation protocols, and designated liaisons.
- **Representation in Recovery Governance (Critical):**
Active Tribal representation within recovery task forces and decision-making bodies.
- **Culturally Informed Recovery Protocols:**
Recovery strategies that reflect cultural, historical, and community-specific considerations.
- **Communication & Coordination Plan:**
Defined communication channels and coordination approaches tailored to Tribal Nations.
- **Pre-Identified Partnership Mapping:**
Established relationships with Tribal Nations prior to a disaster, ensuring proactive—not reactive—engagement.

NOTE: “Partnership mapping” is used in place of “stakeholder mapping” to align with culturally appropriate language.

DRIS™ High-Value MVP KPIs

FRAMEWORK	KPIs	SCORE	WEIGHT % [NO TRIBAL]	WEIGHT % [NO TRIBAL]

Grand Total [Tribal]		97	N/A	100%

KEY FRAMEWORK CATEGORY CLARIFICATION

While *Capacity Building & Community Planning* and *Public Information & Community Engagement* seems to have an overlap. They are different.

Capacity Building & Community Planning refers to *organizational readiness, planning, and capability development. It is internal and structural readiness and it focuses on preparedness before disasters. Examples include: Training & simulations, Pre-disaster recovery plans, and Partnerships for capability building → Can we execute recovery effectively?*

Public Information & Community Engagement refers to *public communication, transparency, and community interaction. This is external and communication execution. It focuses on public interactions. Examples include: Crisis communication plans, Public messaging, and Feedback loops. → Can we communicate and engage effectively?*

DRIS™ High-Value MVP KPI Gaps

DRIS™ COORDINATION COMPLEXITY MODULE (CCM) – A SELECTABLE GOVERNANCE COORDINATION FRAMEWORK.

CCM enables DRIS™ to dynamically adapt scoring, governance workflows, and resilience intelligence based on the operational coordination complexity of a country, state, parish, municipality, or organization. It is a jurisdictional coordination model attached to users who need it most. A small municipality may not need this level of orchestration, which means we cannot force every jurisdiction to score the same because smaller areas become unfairly penalized, while highly interconnected jurisdictions are under-evaluated.

For DRIS to be an operational powerhouse, the CCM is key. When thinking through structural, contextual, jurisdiction-dependent, and operationally scalability, the question then becomes – *How complex and interconnected is the recovery governance environment?*

FRAMEWORK	KPI	SCORE	WEIGHT
Adaptive Coordination	Interjurisdictional Coordination	3	
	Tribal Nations Coordination	2	
	Regional Coalition Coordination	3	
	Critical Infrastructure Coordination	3	
	Tourism Economy Coordination	2	
	Coastal Recovery Coordination	3	

JAMAICA CASE STUDY:

- Highly Parish-dependent Country.
- Collaboration across Parishes must exist.
- Disaster response may require:
 - Cross-parish coordination
 - Centralized ministry coordination
 - Utility coordination
 - Tourism corridor coordination, and
 - Coastal or rural coordination.

Continuous Improvement Framework and KPIs

This Section was created for continuous monitoring, testing and improvement. It was not conceptually included in the scoring system percentage. However, they are crucial. **Should they be included? If yes (measured), at what weight / impact should they be held to?** **NOTE:** Key discussion point for the DRIS™AC.

FRAMEWORK	KPIs	SCORE
Continuity & Testing / Continuous Improvement Plan	<i>After Action Reports From Prior Disasters</i>	2
	<i>Lessons Learned</i>	2
	<i>Case Studies / Use Case Scenarios</i>	1
	<i>Best Practices</i>	2
	<i>White Papers</i>	1
	Total	8

4 CRITICAL KPI SAFEGUARDS

Prevents Inflated Scores

Missing critical foundational elements caps the maximum overall score.

MISSING CRITICAL KPI (EXAMPLES)	MAX SCORE CAP
 No Long-Term Recovery Coordinator	60%
 No Recovery Plan	70%
 No Long-Term Recovery Finance Plan	75%
 No Housing Damage Assessments	70%

RULE

Final Score =
MIN (Calculated Score,
KPI Cap)

Ensures a state, parish, or municipality cannot be rated as **Thriving** if critical KPIs are unmet.

DRIS™ High-Value MVP Critical KPI Safeguard

SkillVantage has built a weighted readiness index, not just a checklist. This simply means:

- Some domains should carry more influence
- Missing critical KPIs should block high scores

Therefore, certain KPIs should Cap the maximum score if missing. This prevents **score inflation**, and introduces **score caps** if critical KPIs are missing:

MISSING CRITICAL KPI	MAX SCORE CAP
No Recovery Coordinator	60%
No Recovery Plan	70%
No Finance Plan	75%
No Tribal Engagement Framework (if applicable)	70%
AI Role: AI detects when a critical KPI is missing or weak. System Behavior: Calculated Score: 82%. Missing Recovery Plan. Final Score capped at 70%. Classification: Thriving, not Resilient.	

Scores cannot indicate **Thriving** and **Resilient** unless critical KPIs are met. A state, parish, or municipality cannot achieve a high readiness index if foundational capabilities are missing. This methodology ensures calibrated results accurately represent true readiness and are not artificially inflated, delivering **defensible, transparent, and actionable results**.

DRIS™ High-Value MVP Critical KPI Safeguard

SkillVantage has built a weighted readiness index, not just a checklist. This simply means:

- Some domains should carry more influence
- Missing critical KPIs should block high scores

Therefore, certain KPIs should Cap the maximum score if missing. This prevents **score inflation**, and introduces **score caps** if critical KPIs are missing:

MISSING CRITICAL KPI	MAX SCORE CAP
No Recovery Coordinator	60%
No Recovery Plan	70%
No Finance Plan	75%

Scores cannot indicate ***Thriving*** and ***Resilient*** unless critical KPIs are met. A state, parish, or municipality cannot achieve a high readiness index if foundational capabilities are missing. This methodology ensures calibrated results accurately represent true readiness and are not artificially inflated, delivering **defensible, transparent, and actionable results**.

5 RESILIENCE CLASSIFICATION

SCORE RANGE	RESILIENCE LEVEL	DESCRIPTION
85 – 100%	RESILIENT	Highly prepared, resilient, and adaptive.
70 – 84%	THRIVING	Strong capability with minor gaps to address.
50 – 69%	NEEDS SUPPORT	Moderate readiness; improvements needed.
< 50%	NOT YET STARTED	Significant gaps; high vulnerability.

Classifications provide a clear, consistent view of resilience to guide action and investment.

DRIS™ H-V MVP Dashboard [Score & Gaps]

RECOMMENDATION AI

Purpose: Turn score gaps into action plans.

Inputs: Low-scoring KPIs. Missing critical KPIs. Country/State / Parish profile. Disaster type. Population vulnerability. Available partners. Funding sources. Best practices

Outputs: Top 5 Immediate Actions. Top 5 Strategic Actions. Key Barriers. Potential Partners. Resource Recommendations

Recommendation Logic: If KPI score < threshold → identify gap → map to best practice → recommend action → attach resource or partner

Example: Gap: No long-term recovery finance plan

Recommendation: Develop recovery finance plan within 90 days.

Potential partners: World Bank, IDB, CCRIF, CDEMA, local finance ministry.

Outputs: Projected DRIS™ score. Score shift. Estimated impact reduction. Cost-benefit summary. Risk level. Recommended mitigation actions

DRIS™ H-V MVP Dashboard [Score & Gaps]

SCENARIO SIMULATION AI

Purpose: Allow leaders to test “what-if” scenarios.

Example questions

- What happens if another Cat-4 hurricane hits within 3 years?
- What if housing investment increases by 20%?
- What if coastal protection doubles?
- What if health system recovery is delayed?

Inputs: Current DRIS score. Hazard type. Time horizon. Investment levels. Population exposure. Infrastructure conditions. Economic dependency. Historical disaster data

Outputs: Projected DRIS score. Score shift. Estimated impact reduction. Cost-benefit summary. Risk level. Recommended mitigation actions

Simulation Flow: User selects scenario

- AI applies assumptions
- model estimates impact
- DRIS score recalculates
- recommendations update

DRIS™ H-V MVP Dashboard [Score & Gaps]

EQUITY-ADJUSTED INSIGHT AI

Purpose: Show how recovery differs across vulnerable groups.

Equity groups: Women. LGBTQIA2+ (**CULTURAL SENSITIVITY NOTE: Cannot include for countries such as Jamaica**). Children. Low-income communities. Rural / coastal communities. Persons with disabilities. Indigenous / Maroon communities. LGBTQIA2+ communities, where relevant and safely measurable (**CULTURAL SENSITIVITY NOTE: Cannot include for countries such as Jamaica**)

Outputs: Overall Domain Score. Equity-Adjusted Score. Service Access Gap. Recovery Timeline Gap. Risk Rating. Targeted Recommendations

Example:

- Housing Recovery:
 - Overall Score: 72%
 - Low-Income Equity Score: 48%

Insight: Recovery is progressing overall, but low-income households are significantly behind.

DRIS™ H-V MVP Dashboard [Score & Gaps]

AI CONFIDENCE & HUMAN REVIEW

Every AI result should show:

- AI Score
- Confidence %
- Evidence Used
- Human Review Status
- Reviewer Name
- Approval Date

Confidence rules

- 90–100% = Auto-suggest, still reviewable
- 70–89% = Human review required
- Below 70% = Cannot score automatically

DRIS™ WORKFLOW LIFECYCLE (DATA FLOW)

Design principle: Controlled data movement with validation at each stage. No record becomes “official” without passing through defined checkpoints.

END-TO-END LIFECYCLE (CORE FLOW)

Create → Validate → Approve → Lock → Report → Audit → Update (if needed)

STAGES	DETAILS
Stage 1: Data Creation (Input Layer)	Actor: Field/User Operator Action: Enter employee data: [ID. Name. Position. Location. Status] System Behavior: Auto-tag record as: Status = “Draft”. Owner = Creator. State / Parish = Assigned Controls: Required fields enforced. Duplicate ID check. Basic validation (format, completeness)
Stage 2: Data Validation (Quality Control)	Actor: State / Parish Data Officer Action: Review submitted records. Correct errors. Complete missing fields System Behavior: Record moves to: Status = “Validated” Controls: Cannot approve. Must resolve: Missing fields. Incorrect formats. Duplicate entries
Stage 3: Approval (Authority Checkpoint)	Actor: State / Parish Manager Action: Approve or reject record System Behavior: If approved: Status = “Approved”. If rejected: Sent back to Data Officer with comments Controls: Approval required before visibility in reports. Comments required for rejection
Stage 4: Data Locking (Integrity Layer)	Trigger: Approval completed System Behavior: Record becomes: Locked = TRUE. Editable only by Admin (if unlocked) Purpose: Prevent post-approval tampering. Ensure reporting accuracy

STAGES	DETAILS
Stage 5: Reporting & Visibility	Actors: State / Parish Manager. Country Executive. Auditor System Behavior: ONLY approved records appear in: Dashboards, Reports & Analytics Controls: Real-time aggregation: State / Parish → Country level
Stage 6: Audit & Monitoring	Actor: Country Administrator / Auditor Action: Review logs and system activity System Tracks: Who created record. Who edited. Who approved. Timestamp of each action Controls: Full traceability. No silent changes allowed
Stage 7: Update / Change Request (Controlled Edit Loop)	Trigger: Change needed after approval Flow: User submits update request. Record is: Temporarily unlocked (Admin-controlled) AND Status = "Pending Update". Goes back through: → Validation → Approval → Lock
Rule: No direct edits to approved records without re-approval cycle	

VISUAL FLOW

MANDATORY AUDIT LOGGING

Every action must log:

Who

What

When

Before / After values

Thank You!

DRIS™ High-Value MVP Additional Data

MULTI-STATE / PARISH / NATIONAL SCALING LOGIC	FAILURE POINTS TO AVOID	GOVERNMENT-GRADE ENHANCEMENTS (CYBER REVIEW NEEDED)
▪ Each State / Parish operates independently at: ○ Creation → Validation → Approval ▪ System aggregates upward: ○ State / Parish → National dashboards ▪ No cross-State / Parish editing allowed	▪ Skipping validation step ▪ Allowing approval by wrong role ▪ Editing locked records without audit trail ▪ Showing unapproved data in reports ▪ No rejection feedback loop	What DRIS™ needs to be enterprise / government ready: ▪ Version history per record ▪ Digital approval signatures ▪ Time-stamped approvals ▪ Data retention policies ▪ Role-based escalation paths

AUTOMATION OPPORTUNITIES

Auto-Validation Rules

- Required fields check
- Duplicate detection
- Location verification

Alerts & Notifications

- “Record pending validation” → Data Officer
- “Record pending approval” → Manager
- “Data incomplete” → State / Parish

Escalation Logic

- If not approved in X days:
 - Notify Country Admin

The **Protocols and Training** tab on DRIS could include a “Mentor Hub” (Mentor-Protégé Program (MPP)], where decision-makers filter mentors by hazard type, income level, or governance model. Protégé uses Mentors for **best practice, use case scenarios**, etc. When a country / state / municipality, etc. scores Resilient ($\geq 80\%$) overall or in a specific domain: Tag it as a “Mentor Candidate” for that domain.

Automatically: Document key practices, policies, and funding models. Match them with Thriving / Needs Support places that share similar hazards or socio-economic context (e.g., Jamaica mentoring other Caribbean SIDS on catastrophe bonds and risk financing).

Generate “Mentor Packages”: Webinars, peer exchanges, training decks. Templates (PDRPs, communication plans, housing strategies). Potential twinning arrangements between local governments.

Global Recovery Map:

- **Widget Type:**
 - Interactive Choropleth Map
 - Label: Global Long-Term Recovery Health (Latest Disaster per Country)
 - Countries shaded Green / Yellow / Red / Gray
- **Hover Data:**
 - Country Name
 - Recovery Health %
 - Disaster Type & Date
 - Primary Vulnerable Populations
 - Resilience Rank

Global Score Summary:

- **Widget Type**
 - KPI Card Row.
- **Cards (6):**
 - Global Average Recovery Score – %
 - Countries in Resilient Zone (80–100%)
 - Countries in Thriving Zone (60–79%)
 - Countries Needing Support (<60%)
 - Top-Ranked Resilient Country (Latest Quarter)
 - Most Impacted Vulnerable Group (Global Trend).

High-Risk Geographies:

- **Widget**
 - Heatmap
- **Labels:** Risk Hotspots:
 - Hurricanes
 - Floods
 - Earthquakes
 - Conflict
 - Wildfire

Mentor Network Carousel:

- **Widget:**
 - Horizontal scroll of mentor countries.
- **Labels:**
 - Countries Ready to Mentor Peers.
 - Based on High Resilience Scores in: Governance, Housing, Health & Infrastructure

DRIS™ H-V MVP Scenario Simulation Screen

SCENARIO SIMULATOR SCREEN

- Scenario Builder: Question: What happens if another Category 4 hurricane hits within 3 years?
- **Inputs:** Hazard Type. Time Horizon. Investment Change. Housing Investment %. Coastal Protection %. Health System Investment %
- **Outputs:** Projected DRIS Score. Score Shift. Estimated Impact Reduction. Cost-Benefit Summary. Top Recommended Actions

ESTIMATED IMPACT REDUCTION

\$620M
(USD)

COST-BENEFIT RATIO

1.8 : 1

TOP RECOMMENDED ACTIONS

- 1 Increase coastal protection investments
- 2 Strengthen building codes and enforcement
- 3 Expand health system surge capacity
- 4 Pre-position emergency supplies and shelters

COST-BENEFIT SUMMARY

Total Investment	\$320M
Avoided Losses	\$580M
Net Benefit	\$360M
ROI	1.8 : 1

MENTOR HUB

- **Purpose:** Match high-performing countries/State / Parishes with lower-performing ones.
- **Main:** Mentor Candidate Cards
- **Card:** Country / State / Parish. Strong Domain. Score. Best Practice Summary. Suggested Match
- **Actions:** View Mentor Package. Generate Training Deck. Create Peer Exchange.
- **Rule:** If domain score $\geq 80\%$, tag as Mentor Candidate.
